RE: Fluoxetine Fixed Low Dose Protocol: CT Materials

A decision has been made by Mr. Wood to amend the fluoxetine fixed low dose protocol (B1YMCHCDD-79). Upon his recommendation, we will exclude the 10 mg fluoxetine dosage regimen. With this exclusion, please revise the CT assembly by removing all patient kits that contained 10 mg. This will include 180 kits with bottles having CT No. 8033-5A. This procedure has been discussed with Max Talbott for regulatory adherence.

We are still scheduled to start this study on 6/23/85. We will need the CT's released by that date. If this is a problem, please call.

Thank you for your cooperation.
